Europe - CPD?

Harmonization & Standardization of
Continuing Professional Development for Graduate Dentists

Dent CPD - Outputs

- Inventory by literature & internet search, survey & consensus methods
 - existing CPD programs & providers;
 - agreement on core components; identification of best practice.
- <u>Guidelines</u> organization, quality management & assurance of CPD programs.
- Guidelines for delivery of competence-based CPD modules
- Core topic, exemplar teaching module.
- Dental CPD Reference Manual
 - Eur J of Dent Ed, Supplement

Dent CPD - Impact

- This project aimed to
 - modernise the strategic role of dental schools in HEIs in the quality management and provision of CPD and also
 - develop cooperation between universities and other professional stakeholders in the delivery of CPD.

Dent CPD - Impact

- EU-wide recognition of CPD activities should
 - promote the freedom of movement for all graduate dentists in Europe, which can
 - support systems of revalidation, to the ultimate benefit of patient safety.

Dent CPD - Impact

- Standardization and harmonisation of CPD
 - Facilitate the recognition of each others CPD activities,
 - promoting opportunities for EU graduate dentists to live and work anywhere in the EU,
 - in turn, supporting the provision of a high quality clinical service for their patients.

Inventory

- Literature & Internet Search
- Global Survey of Dental CPD
- Consensus on Core topics of Dental CPD

Introduction: In the context of free movement, EU-citizens need assurance that dental practitioners providing their care have a degree/license to practice that meets EU-standards and that they maintain their knowledge and skills through ongoing

Aim: One sim of the 'DentCPD' project (HYPERIINK 'http://www.dentcpd.org' www. dentopd.org) was to identify and agree essential CPD requirements for EU dentists. This paper reports the consensus process and outcomes.

Methods: Agreement on core components of CPD was achieved through a three stage process an online survey of dental educators' (n = 143) views on compulsory topics; a paper-based questionnaire to practitiones (n = 411); leading to a proposal discussed at the Association for Dental Education (ADEE) 2011 Lifelong Learning special interest group (SIG).

Results: From the online survey and practitioner questionnaire, high levels of agree RESULTS. From the online survey and practitioner quotisonnaire, high levels of agree-ment were advised for medical emergencies (89%), infection control (59%) and the medically compromised patient (71%). The SIG (34 attendees from 16 countries) con-cluded that these three CPD topics plus radiation protection should be core-comput-sory and three CPD topics should be core-recommended (health and safety, pain sory and three CPD topics should be core-recommended (health and safety, pair management, and safeguarding children & vulnerable adults). They also agreed that

Abstract

Aim: Free movement of dental professionals across the European Union calls for more uniform continuing education in dentistry to ensure up-to-date, high-quality patient care and patient safety. This article provides guidelines for the management and delivery of high-quality continuing professional development (CPD) by European dental schools and other CPD provides.

Method: The guidelines are based on an extensive literature inventory, a survey of existing practices (both available as separate publications), discussions during meetings of the Association for Dental Education in Europe in 2011 and 2012 and debate amongst the members of the DentCPD project team representing six dental schools.

Results: On the basis of the literature review, survey and discussions, we recomm that (i) every dentist should be given the opportunity for CPD, (ii) providers should he quality-approved and impartial, (iii) educators should be approved, impartial, suitably trained, and with educational expertise, (iv) the mode of CPD delivery should suit the educational activity, with clear learning objectives or outcomes, (v) effort should be made to assess the learning, (vi) participant feedback should be collected and analysed to inform future developments and (vii) uniform use of the pan-European system of learning credit points (ECTS) should be implemented.

Condusion: Implementation of these guidelines should make dental CPD more transparent to all relevant parties and facilitate the transferability of earned credits across the European Union. It will also enable better quality control within dentistry, resulting in enhanced dental care and ultimately the improvement in patient safety.

e-mail: ak avad @dent u oa.gr Accepted: 14 February 2013

Aims: To provide evidence-based and peer-reviewed recommendations for the development of dental continuing professional development (CPD) learning e-modules

Methods: The present recommendations are consensus recommendations of the DentCPD project team and were informed by a literature research, consultations from e-learning and IT expert, discussions amongst the participants attending a special interest group during the 2012 ADEE meeting, and feedback from the evaluation procedures of the exemplar e-module (as described in a companion paper within this Supelement). The main focus of these recommendations is on the courses and modules organised and offered by dental schools.

Results and discussion: E-modules for dental CPD, as well as for other health professionals' continuing education, have been implemented and evaluated for a number of years. Research shows that the development of e-modules is a team process, undertaken by academics, subject experts, pedagogists, IT and web designers, learning technologists and librarians. The e-module must have clear learning objectives (outcomes), addressing the learners' individual needs, and must be visually attractive, relevant, interactive, promoting critical thinking and providing feedback. The text, graphics and animations must support the objectives and enable the learning process by creating an attractive, easy to navigate and interactive electronic environment. Technology is usually a concern for learners and tutors therefore, it must be kept simple and intemperable within different systems and software. The pedagogical and technological proficiency of educators is of paramount importance, yet remains a challenge in many instances.

Condusions: The development of e-courses and modules for dental CPD is an endeavour undertaken by a group of professionals. It must be underpined by sound pedagogical and e-learning principles and must incorporate elements for effective visual learning and visual design and a simple, consistent technology.

Dental clothing & Surface coverings

Sterilization of dental instruments

Sterilization of handpieces and burrs

Impressions for the Lab

Accident and exposure to infected material-Post exposure prophylaxis (PEP)

Protection measures after ending work

Introduction

Sterilization and cross-infection control is a core compulsory or recommended dental CPD, topic in most European countries.

The e-module available here has been developed by the Dent CPD project to serve as an exemplar module for the continuing education of European dentists.

Users

This e-module is intended for dental professionals, dental hygienists and auxiliary staff working in a dental health care facility.

Reading Instructions

- · The menu on the left includes different topics of the sterilization procedures in a dental office/health care centre
- The topics can be read sequentially or in random order
- . The frame on right include links to related information
- Users are encouraged to perform the self-assessment guizzes to test their knowledge acquisition
- You can click on the images to enlarge them
- All prevention measures indicated in this module reflect the present scientific data on the subject. They may be amended in the future, according to the future evidence-based scientific data

Welcome to DentCPD

Introduction and Aims

DentCPD is a two year European project entitled 'Harmonisation and standardisation of European Dental Schools programs of continuing professional development for graduate dentists'. This project aims to identify agreed essential CPD requirements of an EU graduate dentist and provide guidelines for the management and delivery of high quality CPD by European dental schools.

The project, initiated by the Association for Dental Education in Europe - ADEE is co funded by the EU under the Lifelong Learning Programme, Erasmus sub-programme, 'Modernisation of higher education'. The project which began on October 2010 will end in September 2012.

Project Rationale

Continuing Professional Development (CPD) is essential to the maintenance of dentists' knowledge and skills, underpinning safe clinical practice. In the context of free movement, EU-citizens need assurance that dental practitioners have a license to practice that meets EU-standards. There is a need for harmonisation of CPD across the EU, supporting the safe management of patients and promoting mobility of practitioners. Currently, dental CPD is provided by a range of bodies and the quality of courses is variable and unregulated. EU Dental schools have a strategic role to play and this innovative CPD project, which is the first of its kind in the global educational arena, will support the modernisation of their role in postgraduate education.
